ASTM A370-20, Standard Test Methods and Definitions for Mechanical Testing of Steel Products, ASTM International, West Conshohocken, PA, 2020, www.astm.org.

ASTM A370 - 20 Standard Test Methods and Definitions for...

ASTM A370 is a testing standard that covers the mechanical testing definitions and procedures of steel products such as wrought and cast steels, stainless steels, and related alloys. This standard covers tension, bend, hardness, and impact tests.

How to Perform ASTM A370 Mechanical Testing of Steel...

ASTM A370, 2020 Edition, August 1, 2020 - Standard Test Methods and Definitions for Mechanical Testing of Steel Products These test methods 2 cover procedures and definitions for the mechanical testing of steels, stainless steels, and related alloys. The various mechanical tests herein described are used to determine properties required in the product specifications.

ASTM A370 - Standard Test Methods and Definitions for...

ASTM A370 is an umbrella spec used to cover assorted mechanical testing on steel specimens. Tests included under the specification are tensile tests, bend tests, compression tests, impact tests and hardness tests.

ASTM A370 - Mechanical Test Methods for Steel

This standard is issued under the ?xed designation A370; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision.

Technical Literature: ASTM A370 / ASME SA-370 Company...

ASTM A370-19 is used to test and determine specific mechanical properties of steel, stainless steel, and related alloy products. It is important that these types of steel are tested and defined because they are used for different purposes.
