As we have seen, Georgescu-Roegen's bioeconomic theory represents a  
radical criticism of neo-classical theory. He pointed out the  
limitations, which are basically of an entropic nature, to which the  
process of economic growth is subject.

FROM BIOECONOMICS TO DEGROWTH - Georgescu-Roegen

Nicholas Georgescu-Roegen's (1906-94) most original contribution is  
his bioeconomic theory. Based on a profound rethinking of the  
foundations of neoclassical economics, bioeconomics represents a  
completely new paradigm compared to both the standard and the Marxist  
approach.

I conclude that Georgescu-Roegen might be a source of inspiration for degrowth defenders only in a very narrow sense. A cautious reading of his bioeconomic paradigm shows that Georgescu-Roegen's stance was

Nicholas Georgescu-Roegen and degrowth

This ``bioeconomic criticism'' is the first pillar of degrowth (Georgescu-Roegen 1971a, 1971b). Georgescu-Roegen was an eclectic, original author who is credited with numerous seminal contributions in several fields of economic theory. However, his most original and significant contribution is his bioeconomic theory (Bonaiuti 2011).

Recent events including the financial crisis and the gradual lessening of the planet's natural resources have raised the fundamental question as to whether the capitalist market system can survive its own contradictions or whether we are witnessing the outset of a profound change in civilization. By deploying the tools of the science of complexity alongside those of historical research, Mauro Bonaiuti tackles this basic question, posed against a backcloth of declining marginal returns where growth in the complexity of industrial, military and bureaucratic-institutional apparatuses is thought to have led to progressive increases in economic, social and environmental costs. In this framework, the economic crisis we are traversing, grave as it is, could be interpreted not as a simple cyclical crisis, from which it is possible to escape by the traditional policies of supporting growth, but as the outcome of a 'passage of civilization' inscribed in the long-term evolutionary dynamics of capitalism. After the crisis that started in 2008, with millions of people unemployed, with the failure of the economy to pick up and with the ever-growing sense of precariousness and insecurity, we are beginning to suspect

**Economics** that we are facing something more than a cyclical crisis.

Degrowth is a rejection of the illusion of growth and a call to repoliticize the public debate colonized by the idiom of economism. It is a project advocating the democratically-led shrinking of production and consumption with the aim of achieving social justice and ecological sustainability. This overview of degrowth offers a comprehensive coverage of the main topics and major challenges of degrowth in a succinct, simple and accessible manner. In addition, it offers a set of keywords useful for intervening in current political debates and for bringing about concrete degrowth-inspired proposals at different levels - local, national and global. The result is the most comprehensive coverage of the topic of degrowth in English and serves as the definitive international reference. the problems in institutional economics. Part III covers the epistemological and methodological concerns in economics. The title also talks about economic theories. The book will be of great interest to economists and readers who want to enhance their understanding of economic concepts.

What do the economic theories of thought-leaders in economics, such as Smith, Keynes, Marx and Schumpeter, tell us about globalisation in the twenty-first century? Great economic theories have provided a narrative of how society should work in all its aspects, and can offer renewed usefulness for today's society. Each economic theory is presented for easy access, readability and simplicity; explaining the criticism a particular theory poses against its own contemporary environment, such as the poverty produced by Manchester capitalism in Marx, and then applying those historical lessons to our current time. Should some economic theories be left sitting on a shelf, safely without any impact on us, or do some great economic ideas still have something to contribute to the grand quest for a more just society in its many interpretations?

The future of economic growth is one of the decisive questions of the twenty-first century. Alarmed by declining growth rates in

Industrialized countries, climate change, and rising socio-economic inequalities, among other challenges, more and more people demand to look for alternatives beyond growth. However, so far these current debates about sustainability, post-growth or degrowth lack a thorough historical perspective. This edited volume brings together original contributions on different aspects of the history of economic growth as a central and near-ubiquitous tenet of developmental strategies. The book addresses the origins and evolution of the growth paradigm from the seventeenth century up to the present day and also looks at sustainable development, sustainable growth, and degrowth as examples of alternative developmental models. By focusing on the mixed legacy of growth, both as a major source of expanded life expectancies and increased comfort, and as a destructive force harming personal livelihoods and threatening entire societies in the future, the editors seek to provide historical depth to the ongoing discussion on suitable principles of present and future global development. History of the Future of Economic Growth is aimed at students and academics in environmental, social, economic and international history, political science, environmental studies, and economics, as well as those interested in ongoing discussions about growth, sustainable development, degrowth, and, more generally, the future.

**Nonviolent** Political Economy offers a set of theoretical solutions and practical guidelines to build an economy of nonviolence which implies a social state of peacefulness, involving minimal violence and minimal destruction of nature. The book provides renewed reflections on heterodox economics, ecological economics, anthropology, Buddhism, Gandhianism, disarmament, and business ethics, as well as innovative initiatives such as Blue Frontiers. It also sets out feasible solutions to rebuild countries that have suffered prolonged conflicts such as Syria, Iraq and Kurdistan. Bringing together authors from around the world, this collection includes new perspectives on the abolition of profit; disarmament; obliteration of the consumer society; expansion of collective property; Buddhist and Gandhian economies; small-scale and artisanal production, the increasing use of clean energies; a gradual reduction in the human population; political processes closer to direct and radical democracy, and anarchy. Discussing cutting-edge developments, this book provides valuable tools to build alternatives to the prevailing models of (violent) political economy. It will be of great interest to a public of critical citizens, students and researchers from a range of disciplines and backgrounds, and all those seeking to understand the fundamental concepts of nonviolent political economy.

**Ecobionics** This book explores the policy implications of the unified theory of capitalism—how economic growth has led to a new epoch, the Anthropocene, and it presents a new set of economic principles that are needed in this new age. The unified theory of capitalism has been published as a new scientific endeavor, attempting to present new economics for the Anthropocene age that are empirically verifiable and fully consistent with the physical sciences. This book elaborates on the implications of the unified theory for both the science of economics and for public policies. In particular, this book develops in more detail the policy implications, discussing the fundamental economic and societal policy issues of our time—employment, inequality, the environment, and quality of life—in empirical terms.

Contestations over knowledge - and who controls its production - are a key focus of social movements and other actors that promote food sovereignty, agroecology and biocultural diversity. This book critically examines the kinds of knowledge and ways of knowing needed for food sovereignty, agroecology and biocultural diversity. 'Food sovereignty' is understood here as a transformative process that seeks to recreate the democratic realm and regenerate a diversity of autonomous food systems based on agroecology, biocultural diversity, equity, social justice and ecological sustainability. It is shown that

**Alternatives** to the current model of development require radically different knowledges and epistemologies from those on offer today in mainstream institutions (including universities, policy think tanks and donor organizations). To achieve food sovereignty, agroecology and biocultural diversity, there is a need to re-imagine and construct knowledge for diversity, decentralisation, dynamic adaptation and democracy. The authors critically explore the changes in organizations, research paradigms and professional practice that could help transform and co-create knowledge for a new modernity based on plural definitions of wellbeing. Particular attention is given to institutional, pedagogical and methodological innovations that can enhance cognitive justice by giving hitherto excluded citizens more power and agency in the construction of knowledge. The book thus contributes to the democratization of knowledge and power in the domain of food, environment and society.
