g³, G3 (pronounced "g" cubed) is GE's game-changing alternative to SF 6 SF6 gas, developed for HV electrical transmission equipment. g³ G3 products feature the same ratings and same dimensional footprint as the state-of-the-art SF 6 SF6 ones, with a drastically reduced environmental impact: more than 99% less gas global warming potential (GWP), comparatively.

(PDF) Characteristics of g3 – an alternative to SF6

GE jointly developed g3 (green gas for grid) with 3M™ Company, a leader in environmentally sustainable solutions. g3 has 98% less impact on global warming than SF6. With performances comparable to SF6, it is a suitable technology for the development of today's new generation of clean high- and ultrahigh voltage equipment.

Therefore, the insulating alternatives to SF₆ gas which could be considered for retro-fitting into existing switchgear under laboratory conditions are AirPlus, g3, HFC1234zee and solid epoxy. The interrupting alternatives to SF₆ gas which could be considered for retro-fitting into existing switchgear under laboratory conditions are g3 and

Potential applications of SF 6-free gas mixture, called g 3 and based on 3M™ Novec™ 4710 Dielectric Fluid for dielectric insulation and arc switching into high voltage apparatuses are reported with the aim to reduce the global warming potential of the new mixture to typically less than 2% of the SF 6 equivalent with no or minor design modification with respect to typical SF 6 design.

Characteristics of g3 - an alternative to SF6

The fluoroketone-based SF6 alternative gas mixture is a chemical compound developed for switchgear applications by Hitachi ABB Power Grids in collaboration with 3M. It has a dielectric performance similar to SF6 when utilized in indoor applications, but with very low Global Warming Potential (GWP)*.
