Geometry means to draw shapes, angles or lines accurately. These constructions use only compass, straightedge (i.e. ruler) and a pencil. This is the "pure" form of geometric construction: no numbers involved!

Geometric Constructions

As you are familiar with various shapes, you can draw them with your hands. You are well aware with the geometric constructions of a line segment of a certain measurement, a square, a rectangle or a triangle with the help of a ruler.

Geometric constructions involve drawing geometric shapes that satisfy certain requirements using a straight-edge and a pair of compasses. The tools to use are a ruler (or straight-edge) and a pair of compasses. A few points to remember when doing the types of

Wikipedia

In order to make arithmetic constructions, two segments, one of length x and the other length y , and a unit length of 1 are given.

Through basic geometry and algebra, other related lengths can be created.

Five arithmetic constructions are $xy +$, $xy -$, xy , xy , and x .
