Software has become crucial to the very survival of civilization. But badly written, insecure software is hurting people—and costing businesses and individuals billions of dollars every year. This must change. In *Geekonomics*, David Rice shows how we can change it. Rice reveals why the software industry is rewarded for carelessness, and how we can revamp the industry 's incentives to get the reliability and security we desperately need and deserve. You ' ll discover why the software industry still has shockingly little accountability—and what we must do to fix that. Brilliantly written, utterly compelling, and thoroughly realistic, *Geekonomics* is a long-overdue call to arms. Whether

These improvements in the Car Keys Systems, has however made it difficult for genuine car owners to duplicate their Car keys or get a replacement when they lose them. sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the

In 1871 when the University of Alabama reopened after its destruction by Federal troops, Eugene Allen Smith returned to his alma mater as professor of geology and mineralogy. Until his death in 1927 this gifted man devoted his abundant energy and his stout heart to the welfare of the school and the State. After persuading the Legislature to appoint him State Geologist in 1873, he spent his summers enduring chills, fevers, and verbal abuse as he searched for industrial raw materials that could bring about better lives for destitute Alabamians. Traveling in a mule-drawn wagon, he recorded in his

Journal detailed observations, botanical and geological discoveries, and mineral analyses. He loaded the wagon with specimens for the University museum he dreamed of creating some day. He inventoried industries that had failed or been destroyed, judging whether they were worth salvaging. Interspersed with this information were pithy comments on people he met, frustrations he dealt with, historical notes, and poetic descriptions of rocks and creeks and mountains, giving a vivid picture of Alabama in transition. What he accomplished, against monumental odds, became the catalyst that transformed Alabama from an aimless and poverty-stricken agricultural state to an industrial giant to be reckoned with. How he accomplished what he did, with very little support and hardly

The story of "Little Doc," as told in Eugene Allen Smith's Alabama, is drawn from many sources: Smith's transcribed field notes, countless numbers of letters he received and the carbon copies of his replies, his published reports over a period of fifty years, wills, genealogical records, histories of the State and of the University of Alabama, and contemporary newspapers.
