Kinematic Synthesis Linkages Jacques Denavit

In mechanical engineering, the Denavit–Hartenberg parameters are the four parameters associated with a particular convention for attaching reference frames to the links of a spatial kinematic chain, or robot manipulator. Jacques Denavit and Richard Hartenberg introduced this convention in 1955 in order to standardize the coordinate frames for spatial linkages. Richard Paul demonstrated its value for the kinematic analysis of robotic systems in 1981. While many conventions for attaching ...

Kinematic synthesis, also known as mechanism synthesis, determines the size and configuration of mechanisms that shape the flow of power through a mechanical system, or machine, to achieve a desired performance. The word synthesis refers to combining parts to form a whole. Hartenberg and Denavit describe kinematic synthesis as...it is design, the creation of something new. Kinematically, it is the conversion of a motion idea into hardware. The earliest machines were designed to amplify human and
