Introduction. This volume has grown out of lectures addressing primarily graduate students and researchers working in related areas in both astrophysics and space sciences. All contributions are self-contained and do not require prior in-depth knowledge of solar physics. The result is a unique textbook that fulfills the needs of those wishing to have a pedagogic exposition of solar physics bringing them up-to-date in a field full of vitality and with exciting research.

This is the first and only postgraduate course of its kind in the UK focusing on solar as a renewable energy. It will help you to develop an in-depth understanding of the theory and practice, along with professional and research skills necessary to characterise, design and manage solar energy systems. A unique element of this course is the collaboration with industry and its relevance to the current issues in the modern day solar energy sector.

The major textbooks used in the first year are listed below. As an introduction to the subject, however, it would be hard to improve on Feynman's 'Lectures' (Lectures on Physics; Feynman, Leighton and Sands, Addison Wesley Vols. 1-3). These are cleverly written, and sufficiently advanced to be used up to degree level, but many sections ...
