This interdisciplinary volume introduces new theories and ideas on creativity from the perspectives of science and art. Featuring contributions from leading researchers, theorists and artists working in artificial intelligence, generative art, creative computing, music composition, and cybernetics, the book examines the relationship between computation and creativity from both analytic and practical perspectives. Each contributor describes innovative new ways creativity can be understood through, and inspired by, computers. The book tackles critical philosophical questions and discusses the major issues raised by computational creativity, including: whether a computer can exhibit creativity independently of its creator; what kinds of creativity are possible in light of our knowledge from computational simulation, artificial intelligence, evolutionary theory and information theory; and whether we can begin to automate the evaluation of aesthetics and creativity in silico. These important, often controversial questions are contextualised by current thinking in computational creative arts practice. Leading artistic practitioners discuss their approaches to working creatively with computational systems in a diverse array of media, including music, sound art, visual art, and interactivity. The volume also includes a comprehensive review of computational aesthetic evaluation and judgement research, alongside discussion and insights from pioneering artists working with computation as a creative medium over the last fifty years. A distinguishing feature of this volume is that it explains and grounds new theoretical ideas on creativity through practical applications and creative practice. Computers and Creativity will appeal to theorists, researchers in artificial intelligence, generative and evolutionary computing, practicing artists and musicians, students and any reader generally interested in understanding how computers can impact upon creativity. It bridges concepts from computer science, psychology, neuroscience, visual art, music and philosophy in an accessible way, illustrating how computers are fundamentally changing what we can imagine and create, and how we might shape the creativity of the future. Credit Analysis and Lending Management is a new Australasian text that focuses on the core lending functions of financial institutions, covering asset management, credit risk assessment and analysis, lending policy formulation and management, and the rise of new product development and marketing in the financial services sector. The value of any financial institution is measured by its ability to effectively manage and reduce its credit risk. This text details the structure of the credit organisation, including loan markets. Relevant financial statements are presented to develop students' interpretative and analytical understanding of financial statements. Features: * Developments in loan marketing and new loan products are profiled and assessed (see chapter 17.) * Problem loan management is discussed as a growing professional issue (see chapter 16). * Detailed case studies at the end of the text present a diverse set of professional scenarios that can be used for assignment, assessment and group work activities. * 'Industry insight' boxes profile current professional issues and identify industry developments. * 'A day in the life of...' boxes highlight the diversity of professional roles in the banking industry.

Hoping to start his life over after his prison release, ladies' man Seven finds himself tempted by the fast money of the drug trade when his day job fails to provide his desired lifestyle, a circumstance for which he teams up with a fellow ex-con for a high-stakes operation. Original. 60,000 first printing.

Music Box Danseur is a ballet-based version of a dramatic and tragic love story set in London, England. Written in a fictional account the story profiles the often brilliant and highly turbulent on and off stage partnership between two of Europe's greatest professional male dancers.

Packed with puzzles and activities: odd one out, counting and sorting, matching, word games, and jigsaws.

The step-by-step format of this text quickly demystifies UNIX and gives users the skills needed to put UNIX to work immediately. Includes an overview of the system, basic system administration tasks, basic UNIX programming, and more.

Ancient healer, modern medicine... Considered to be one of nature's most powerful anti-inflammatory ingredients, turmeric is a powerful medicine that has long been used in the Chinese and Indian systems of medicine as an anti-inflammatory agent to treat a wide variety of conditions, including digestion problems, jaundice, menstrual difficulties, toothache, bruises, chest pain and colic. Turmeric has been harvested for over 5,000 years in its native Indonesia and is a key ingredient in many dishes and medicinal remedies throughout the region. It is now rising quickly in popularity everywhere in the world as wellness seekers of all ages discover the health properties of this incredible food. Scientific studies now show that turmeric contains anti-cancer properties, may be helpful with inflammatory bowel disease, Crohn's, rheumatoid arthritis, help with improved liver function, heart health, may help to lower cholesterol and be protective against Alzheimer's disease. Turmeric becomes more active either when cooked or combined with other specific ingredients such as ginger and black pepper. Whether in root or powder form, turmeric can be used in juices, smoothies, infusions, soups, curries, pulses, stews, for roasting vegetables, adding to hummus, yoghurt and marinades for fish, meat or tofu. All the health benefits, how to use turmeric and 50 delicious recipes are included in this stunning cookbook.
