It was long predicted for the existence of anti-matter in theory so it
seems plausible to me. The nature of dark matter is unknown. A
substantial body of evidence indicates that it cannot be baryonic
matter, i.e., protons and neutrons. The favored model is that dark

Another possibility, from a view of String Theory, is that Dark Matter appears to us as an effect of string/anti-string annihilations. As you may know, quantum mechanics requires that strings must be formed as pairs in the quantum foam – a string and an anti-string – that immediately annihilate each other.

New Theory for the Origin of Dark Matter

Dark matter possibly could be brown dwarfs, "failed" stars that never ignited because they lacked the mass needed to start burning. Dark matter could be white dwarfs, the remnants of cores of dead small- to medium-size stars. Or dark matter could be neutron stars or black holes, the remnants of large stars after they explode.

What Is Dark Matter? | NASA

Antimatter. Not to be confused with Dark matter. For other uses, see Antimatter (disambiguation). In modern physics, antimatter is defined as matter which is composed of the antiparticles (or "partners") of the corresponding particles of "ordinary" matter.

Antimatter - Wikipedia

Third, dark matter is not antimatter, because we do not see the unique gamma rays that are produced when antimatter annihilates with matter. Finally, we can rule out large galaxy-sized black holes on the basis of how many gravitational lenses we see.

Dark Energy, Dark Matter | Science Mission Directorate

Dark matter is hypothesized to be a form of matter thought to account for approximately 85% of the matter in the universe and about a quarter of its total mass – energy density or about $2.241 \times 10^{-27} \text{ kg/m}^3$. Support for its presence is drawn from a variety of astrophysical observations, including gravitational effects that under current theories of gravity do not make sense, unless more ...

Yes. Although the names sound vague and almost fictional, the types of matter called antimatter, dark matter, dark energy, and degenerate matter are all different, specific entities that really exist in our universe. Antimatter is just regular matter with a few
