Theory

The first step in laying out a model airplane design is to determine what type of airplane you wish to build. Will it be a trainer, a sport flyer or some sort of scale project? Will your subject be a high, mid or low wing aircraft? Model size. Once you know what type of plane you wish

to design the next step is figuring out the size of the model. I usually start with determining the wingspan of the model airplane design, as the wingspan will be used as the basis for further model dimensions.

The Design And Construction Of Flying Model Aircraft

Since designing an aircraft is relatively simple and the flight model can help predict performance of real-world aircraft, several aircraft companies use X-Plane in their design process. The

Access Free Model Airplane CarterCopter uses X- Plane for flight training and research. X-Plane also contributed to the design of the Atlantica blended wing body aircraft. And Design Of Flying Model Aircraft
