The electric motor operation is based on the following points: • At least one of the two magnetic field is generated by a solenoid carrying a current. • Phase relation between the rotor and stator magnetic field (i.e. the load angle) must be always greater than 0° in order to keep the motor in motion (negative angles reverse the rotation).

Fundamentals of motor control - STMicroelectronics

There are four main parts to many continuous brushed DC motors. The rotor (the part that rotates) or armature (in engineering speak the armature is the component of an assembly that turns/pivots and that holds the main current carrying coils that produce a magnetic field) in this tutorial the rotor and armature are used interchangeably, i.e., as they are both the turning component in the center.

A unique guide to the integration of three-phase induction motors with the emphasis on conserving energy • The energy-saving principle and technology for induction motor is a new topic, and there are few books currently available; this book provides a guide to the technology and aims to bring about significant advancement in research, and play an important role in improving the level of motor energy saving • Includes new and innovative topics such as a case study of energy saving in beam pumping system, and reactive compensation as a means of energy saving • The authors have worked in this area for 20 years and this book is the result of their accumulated research and expertise. It is unique in its integration of three-phase induction motors with the emphasis on conserving energy • Integrates the saving-energy principle, technology, and method of induction motors with on-site experiences, showing readers how to meet the practical needs and to apply the theory into practice. It also provides case studies and analysis which can help solve problems on-site

[After payment, write to & get a FREE-of-charge, unprotected true-PDF from: Sales@ChineseStandard.net] This Standard stipulates the general safety requirements for small-power motors. This Standard is applicable to small-power motors specified by GB/T 5171 General Technical Requirements for Small Power Motors; other similar motors may also take this as a reference in implementation. This Standard is inapplicable to control motors (such as: servo motor, self-tuning machine, resolver, tachometer generator and induction phase shifter, etc.).
