This review book provides a complete review of a one-year biology course that meets the NYS Living Environment Core Curriculum.Includes four recent Regents exams.

From basic cell structures to scientific inquiry and lab skills, this brief review guides students through their preparation for The Living Environment Regents Examination. The book is organized into nine topics, each covering a major area of the curriculum, and includes a recap of core content as well as review and practice questions, vocabulary, and six recent Regents Examinations.

This high school classroom supplement to the main biology text prepares students in New York State to succeed on the Regents Exam. It presents a subject review, practice ques-tions with answers, and two complete Regents Biology Exam with answer keys. When combined with Barron's Regents Exams and Answers, Biology, it provides students with the most comprehensive test preparation available anywhere. Topics reviewed include ecology, biological organization, formation and structure of the ecosystem, and the interaction between human beings and the biosphere.

Provides a look at the future as it is envisioned by the Media Lab at MIT, where scientists are retooling mass media to the desires and whims of the individual

Based on a number of sample systems of varying complexity, this book illustrates the practical aspects of developing expert systems and knowledge-based applications software. The programming language used is Prolog (Clocksin-Mellish standard). The examples deal with such topics as techniques for heuristic optimization, the implementation of "frames", the construction of explanatory components, etc. The complete, functional code for the sample systems is provided in the appendix and can be used as a basis for further development. This book is not only suitable for self-study, seminars or lectures, but also as a valuable reference and guide for software developers in both commercial and academic environments.
