The Emergence of Subjectivity in the Ancient and Medieval World: An Interpretation of Western Civilization represents a combination of different genres: cultural history, philosophical anthropology, and textbook. It follows a handful of different but interrelated themes through more than a dozen texts that were written over a period of several millennia and, by means of an analysis of these texts, presents a theory of the development of Western civilization from antiquity to the Middle Ages. The main line of argument traces the various self-conceptions of different cultures as they developed historically, reflecting different views of what it is to be human. The thesis of the volume is that through examination of these changes we can discern the gradual emergence of what we today call inwardness, subjectivity, and individual freedom. As human civilization took its first tenuous steps, it had a very limited conception of the individual. Instead, the dominant principle was that of the wider group: the family, clan, or people. Only in the course of history did the idea of what we now know as individuality begin to emerge, and it took millennia for this idea to be fully recognized and developed. The conception of human beings as having a sphere of inwardness and subjectivity subsequently had a sweeping impact on all aspects of culture, including philosophy, religion, law, and art: indeed, this notion largely constitutes what is today referred to as modernity. It is easy to lose sight of the fact that this modern conception of human subjectivity was not simply something given, but rather the result of a long process of historical and cultural

beings – each of us – human. In *Childhood in History: Perceptions of Children in the Ancient and Medieval Worlds*, Aasgaard, Horn, and Cojocarú bring together the groundbreaking work of nineteen leading scholars in order to advance interdisciplinary historical research into ideas about children and childhood in the premodern history of European civilization. The volume gathers rich insights from fields as varied as pedagogy and medicine, and literature and history. Drawing on a range of sources in genres that extend from philosophical, theological, and educational treatises to law, art, and poetry, from hagiography and autobiography to school lessons and sagas, these studies aim to bring together these diverse fields and source materials, and to allow the development of new conversations. This book will have fulfilled its unifying and explicit goal if it provides an impetus to further research in social and intellectual history, and if it prompts both researchers and the interested wider public to ask new questions about the experiences of children, and to listen to their voices.
