Lithium batteries may hold the key to an environmentally sustainable, oil-independent future. From electric cars to a "smart" power grid that can actually store electricity, letting us harness the powers of the sun and the wind and use them when we need them, lithium—a metal half as dense as water, found primarily in some of the most uninhabitable places on earth—has the potential to set us on a path toward a low-carbon energy economy. In *Bottled Lightning*, the science reporter Seth Fletcher takes us on a fascinating journey, from the salt flats of Bolivia to the labs of MIT and Stanford, from the turmoil at GM to cutting-edge lithium-ion battery start-ups, introducing us to the key players and ideas in an industry with the power to reshape the world. Lithium is the thread that ties together many key stories of our time: the environmental movement; the American auto industry, staking its revival on the electrification of cars and trucks; the struggle between first-world countries in need of natural resources and the impoverished countries where those resources are found; and the overwhelming popularity of the portable, Internet-connected gadgets that are changing the way we communicate. With nearly limitless possibilities, the promise of lithium offers new hope to a foundering American economy desperately searching for a green-tech boom to revive it.

Predicting economic challenges that the author believes will occur as a result of China's growing ability to produce U.S. products more cheaply, an economic analysis draws on hundreds of interviews with Chinese, American, and European workers and businesspeople that draw conclusions about China's future as a superpower. 75,000 first printing.

The turbulent and chequered past of the world's most populous country is one of the most fascinating in world history, and relatively little known in the West. From the beginnings of Chinese prehistory right through to internet censorship with the 'Great Firewall of China', Gordon Kerr offers a comprehensive introduction to the sprawling history of this enormous country. *A Short History of China* provides an absorbing introduction to more than 4,000 years of Chinese history, telling the stories of the tyrants, despots, femmes fatales, artists, warriors and philosophers who have shaped this fascinating and complex nation. It describes the amazing technological advances that her scientists and inventors made many

hundreds of years before similar discoveries in Europe. It also investigates the Chinese view of the world and examines the movements, aspirations and philosophies that moulded it and, in so doing, created the Chinese nation. Finally, the book examines the dramatic changes of the last few decades and the emergence of China as an economic and industrial 21st century superpower, making Napoleon Bonaparte's words about her ring true: "Let China sleep, for when she awakes, she will shake the world."

Now in an updated paperback edition, *Why Taiwan Matters* offers a comprehensive but compact introduction to a country that exercises a role in the world far greater than its tiny size would indicate. Leading expert Shelley Rigger explains how Taiwan became such a key global player, highlighting economic and political breakthroughs so impressive they have been called "miracles." She links these accomplishments to Taiwan's determined society, vibrant culture, and unique history. Drawing on arts, economics, politics, and international relations, Rigger explores Taiwan's importance to China, the United States, and the world. Considering where Taiwan may be headed in its wary standoff with China, she traces how the focus of Taiwan's domestic politics has shifted to a Taiwan-centered strategy. All readers interested in Asia and international affairs will find this an accessible and entertaining overview, replete with human interest stories and colorful examples of daily life in Taiwan.

Publisher description: China's economic rise has captured the world's imagination. At the forefront has been the Greater Pearl River Delta, a region consisting of Hong Kong, Macao, and part of Guangdong Province, whose unique and complex complementarities have created a regional powerhouse of global importance. The authors show how the Greater Pearl River Delta region has benefited from China's economic opening by combining the international orientation, business experience, and financial muscle of Hong Kong and Macao with the land, labor, and skills of the Chinese Mainland. They show how this combination has created an increasing number of world beating industries that have attracted companies and business people from all around the globe. They show how China's accession into the WTO strengthens the region's position in the national and international economies. Finally, they show how the region's trajectory will lead it to even greater prominence in the future.

A remarkable history of the two-centuries-old relationship between the United States and China, from the Revolutionary War to the present day From the clipper ships that ventured to Canton hauling cargos of American ginseng to swap Chinese tea, to the US warships facing off against China's growing navy in the South China Sea, from the Yankee missionaries who brought Christianity and education to China, to the Chinese who built the American West, the United States and China have always been dramatically intertwined. For more than two centuries, American and Chinese statesmen, merchants, missionaries, and

adventurers, men and women, have profoundly influenced the fate of these nations. While we tend to think of America's ties with China as starting in 1972 with the visit of President Richard Nixon to China, the patterns—rapturous enchantment followed by angry disillusionment—were set in motion hundreds of years earlier. Drawing on personal letters, diaries, memoirs, government documents, and contemporary news reports, John Pomfret reconstructs the surprising, tragic, and marvelous ways Americans and Chinese have engaged with one another through the centuries. A fascinating and thrilling account, *The Beautiful Country and the Middle Kingdom* is also an indispensable book for understanding the most important—and often the most perplexing—relationship between any two countries in the world.

To celebrate the spectacular 40-year growth of Shenzhen, China's showcase technology and financial hub just across the border from Hong Kong, Wu Guoyong spent the past seven years photographing the city's spectacular architecture from the air and ground, using drone technology to offer a rare perspective. These photographs have been combined with historical archives and other photographers' work to present a visual panorama of the dynamic growth and development of Shenzhen. The earliest photograph dates back to the 1970s, when Shenzhen was little more than a collection of rural villages, rice fields, and small fishing ports. The latest, taken in mid-2018, reveals a futuristic and innovative cityscape reaching out from Shenzhen's coastal beaches across delta lowlands, punctuated by rugged, forested mountain terrain.

“Henry Schlesinger is playful and intelligent and obscenely well read.” – Richard Zacks, author of *The Pirate Hunter* “Henry Schlesinger’s fascinating and superbly researched history of the battery is the story of civilization as we know it.” – Michael Belfiore, author of *The Department of Mad Scientists* Henry Schlesinger’s *The Battery* is the first popular history of the technology that harnessed electricity and powered the greatest scientific and technological advances of our time. If you like *Wired Magazine* and popular science books, you'll love the “hidden history” of *The Battery*.

The United States and China are locked in a “cold tech war,” and the winner will end up dominating the twenty-first century. Beijing was not considered a tech contender a decade ago. Now, some call it a leader. America is already behind in critical areas. It is no surprise how Chinese leaders made their regime a tech powerhouse. They first developed and then implemented multiyear plans and projects, adopting a determined, methodical, and disciplined approach. As a result, China’s political leaders and their army of technocrats could soon possess the technologies of tomorrow. America can still catch up. Unfortunately, Americans, focused on other matters, are not meeting the challenges China presents. A whole-of-society mobilization will be necessary for the U.S. to regain what it once had: control of cutting-edge technologies. This is how America got to the moon, and this is the key to winning this
