Written in a clear and thoughtful style, *Building a Successful Board-Test Strategy, Second Edition* offers an integrated approach to the complicated process of developing the test strategies most suited to a company's profile and philosophy. This book also provides comprehensive coverage of the specifics of electronic test equipment as well as those broader issues of management and marketing that shape a manufacturer's "image of quality." In this new edition, the author adds still more "war stories," relevant examples from his own experience, which will guide his readers in their decisionmaking. He has also updated all technical aspects of the first edition, covering new device and attachment technologies, new inspection techniques including optical, infrared and x-ray, as well as vectorless methods for

detecting surface-mount open-circuit board failures. The chapter on economics has been extensively revised, and the bibliography includes the latest material on this topic.

The U.S. healthcare system is now spending many millions of dollars to improve "patient safety" and "inter-professional practice." Nevertheless, an estimated 100,000 patients still succumb to preventable medical errors or infections every year. How can health care providers reduce the terrible financial and human toll of medical errors and injuries that harm rather than heal? *Beyond the Checklist* argues that lives could be saved and patient care enhanced by adapting the relevant lessons of aviation safety and teamwork. In response to a series of human-error caused crashes, the airline industry developed the system of job training and information sharing known as Crew Resource Management (CRM). Under the new industry-wide system of CRM, pilots, flight attendants, and ground crews now communicate and cooperate in ways that have greatly reduced the hazards of commercial air travel. The coauthors of this book sought out the aviation professionals who made this transformation possible. *Beyond the Checklist* gives us an inside look at CRM training and shows how airline staff interaction that once suffered from the same dysfunction that too often undermines real teamwork in health care today has dramatically improved. Drawing on the experience of doctors, nurses, medical educators, and administrators, this book

demonstrates how CRM can be adapted, more widely and effectively, to health care delivery. The authors provide case studies of three institutions that have successfully incorporated CRM-like principles into the fabric of their clinical culture by embracing practices that promote common patient safety knowledge and skills. They infuse this study with their own diverse experience and collaborative spirit: Patrick Mendenhall is a commercial airline pilot who teaches CRM; Suzanne Gordon is a nationally known health care journalist, training consultant, and speaker on issues related to nursing; and Bonnie Blair O'Connor is an ethnographer and medical educator who has spent more than two decades observing medical training and teamwork from the inside.

Digital health and medical informatics have grown in importance in recent years, and have now become central to the provision of effective healthcare around the world. This book presents the proceedings of the 30th Medical Informatics Europe conference (MIE). This edition of the conference, hosted by the European Federation for Medical Informatics (EFMI) since the 1970s, was due to be held in Geneva, Switzerland in April 2020, but as a result of measures to prevent the spread of the Covid19 pandemic, the conference itself had to be cancelled. Nevertheless, because this collection of papers offers a wealth of knowledge and experience across the full spectrum of digital health and medicine, it was decided to publish the submissions accepted in the review process and confirmed by the Scientific Program Committee for publication, and these are published here as planned. The 232 papers are themed under 6 section headings: biomedical data, tools and methods; supporting care delivery; health and prevention;

precision medicine and public health; human factors and citizen centered digital health; and ethics, legal and societal aspects. A 7th section deals with the Swiss personalized health network, and section 8 includes the 125 posters accepted for the conference. Offering an overview of current trends and developments in digital health and medical informatics, the book provides a valuable information resource for researchers and health practitioners alike.
